

Print Management for Novell

It's here now!

Now you can take control of print costs and print management on Novell OES2 Linux. This proven solution, built for education, helps you:

- *Cut costs* – print quotas encourage students to think before they print
- *Reduce waste* – users confirm job details including color/black and white, output size and more before printing
- *Go green* – environmental impact reporting gives you facts on usage (and savings with PaperCut!)

Visit www.papercut.com to download your free, fully functional trial version.

How it Works

PaperCut™ is the easy way to automatically monitor and manage printing in your organization, giving you control over your costs and environmental impact. PaperCut can operate as a:

- Pay-per-print system where users must have credit available before printing is allowed
- Quota-based system where users are given a print allowance for an interval such as a term or semester
- Tracking system, allowing chargeback of print costs to specific cost centers, faculties or departments.

Printer usage is calculated on a cost-per-page basis with advanced charging options available for color, different page sizes and duplex printing. Printing on large-scale devices, such as plotters, with non-standard sizes can be costed by paper length or area.
