

A CUSTOMER GUIDE TO PAPER CUT MF

Focus on the **health of your patients**, not your printers

Healthcare technology is constantly changing and IT professionals in this space are uniquely positioned to leverage technology to deliver better patient care and improved outcomes.

All of your organization's technology, from medical billing to your remote patient monitoring systems, have to integrate as seamlessly as possible to enable your staff to provide the best and most efficient care for your patients. Printing, scanning and faxing should be the most boring part of your technology stack because it should just work.

Challenge

Legacy technologies, cost and complexity of integrations along with cybersecurity issues make print management a challenging area to control. Ideally, you are able to find a secure software solution that makes printing, scanning, and faxing easier to use and integrate into your current environment.

So if you have . . .

- ▶ the need for interoperability between systems that need printing/faxing workflows
- ▶ a complex printing environment with a variety of printers and mobile devices
- ▶ staff that needs printing to just work
- ▶ lack of visibility and control over who can print what and where

. . . PaperCut MF[™] is the solution for you.

Interoperability with most healthcare IT systems

PaperCut MF interoperates with common faxing providers like WestFax, Concord, OpenText, Retaurus and GoFax. PaperCut MF also interoperates with industry leading EMR applications like Epic, Cerner, and Allscripts. Current trends to enable flexible healthcare delivery from anywhere have also driven the integration of PaperCut MF with platforms like Citrix.

One-of-a-kind compatibility

With the broadest range of print manufacturer integrations and operating system compatibility, PaperCut can scale to suit simple or complex environments.

We have federal laws relating to privacy. Secure Print Release and Find-Me Printing have really made stakeholders more confident in the level of security we provide.

Baptist Health Care, USA

Solution

PaperCut MF slots in seamlessly to make management of your complex printing/faxing environment easier by simplifying workflows and assisting your ever-evolving regulatory needs.

Letting people print easier than ever

Since PaperCut takes a cross-platform and vendor-neutral approach, it works in any environment, giving the same experience on every multi-function device for ultimate efficiency. For doctors, nurses, and staff shuffling between departments, clinics, and campuses, PaperCut's Mobility Print enables their mobile devices – like tablets, smartphones, and laptops – to print with ease. Print Deploy also manages thousands of print queues across multiple sites, allowing you to replicate and push queues to users in the right location. Plus, Scan to Fax streamlines and secures yet another workflow.

Convenience that follows you

It's no secret medical professionals are strapped for time – they can't waste valuable minutes trying to figure out what printer to send a job to, or where their print job mysteriously disappeared to. That's where PaperCut's Find-Me Printing scrubs in. With Find-Me Printing, every print job travels with you, so you can avoid scrolling through a long list of available printers, and simply release at whichever is most convenient. To top it off, it simplifies the administration side of things by minimizing the number of print queues you need to manage.

In situations where Find-Me printing is impractical like single function devices without badge release hardware, Print Deploy steps in again to simplify the deployment of print queues & drivers across complex networks, so you can sit back and watch queues deploy dynamically.

Securing PHI to maintain compliance

From the moment you press print, PaperCut tracks and protects your document, and job logs and audit trails enable you to trace all print jobs back to their source. Secure Print Release ensures a job won't print until you authorize it at the device, so confidential patient information only releases into the right hands. And after printing, watermarking and digital signatures can identify who each page belongs to, altogether encouraging accountability.

Supporting your present and future

PaperCut has spent the last few years creating key integrations with the help of our healthcare customers, but we're not done. With the help of our Authorized Partners, we want to continue to simplify, streamline, and secure all of your printing, faxing and scanning workflows. So keep an eye on this space, or better yet, submit your ideas of our next healthcare integration here.

Benefit

4 ways PaperCut MF™ enhances the print environment in healthcare organizations

1. Simplifies printing

so you and your staff can focus on what matters most.

2. Removes complexities

for a variety of devices and printers across different departments and locations.

3. Secures your printing

from end-to-end so you can rest at ease.

4. Interoperates

with critical healthcare applications to maximize efficiency and security.
